

ABSTRACT OF THE DISCLOSURE

The present mechanism makes a door to be openable from either the left or right side. This mechanism includes first and second pairs of hinges 5, 6, first and second hinge pin drive mechanisms 6, 7, and first and second handles 91, 02. By selectively operating either one of the first and second handles, either one of the first and second pairs of the hinge pins 53, 63 are drawn out of the corresponding one of the first and second pairs of hinges 5, 6, and the door 3 is opened/closed by pivoting around the other of the first and second hinge pins 53, 63 coupled to the corresponding other of the first and second pairs of hinges 5, 6.
